

QUIK-BORE™ HDD Boring Fluid System High Viscosity at Lower Concentrations

Baroid Industrial Drilling Products' QUIK-BORE™ high yield boring fluid system is specially formulated for higher viscosity at lower concentrations. That's a big plus for horizontal directional drilling (HDD), tunneling and micro-tunneling applications. Lower concentrations mean a lower mix per tank cost.

Advantages include:

- High-yielding and easy to mix
- Can be used in unconsolidated formations
- Can provide gel strength to compensate for low annular velocity
- Can minimize the number of boring fluid products required
- Disperses readily in water
- NSF/ANSI Standard 60 certified

QUIK-BORE™ high yield boring fluid system is a proprietary blended product using Wyoming sodium bentonite. It is available from any Baroid Industrial Drilling Products Retailer. To locate the Baroid IDP retailer nearest you, talk to your area IDP Sales Representative or visit www.baroididp.com.
