

## XTRAGEL HDD Boring Fluid System

Baroid Industrial Drilling Products' XTRAGEL high yield boring fluid system is specially formulated for higher viscosity at lower concentrations. That's a big plus for horizontal directional drilling (HDD), tunneling and micro-tunneling applications. Lower concentrations mean a lower mix per tank cost.

Advantages include:

- High-yielding and easy to mix
- Can be used in unconsolidated formations
- Can provide gel strength to compensate for low annular velocity
- Can minimize the number of fluid products required
- Disperses readily in water

XTRAGEL high yield boring fluid system is a blended product using AUSTRALIAN Bentonite. It is available from any Baroid Industrial Drilling Products Retailer. To locate the Baroid IDP retailer nearest you, talk to your area IDP Sales Representative or visit [www.baroidip.com](http://www.baroidip.com).
